

WRL Open Day

Ever wanted to know how beaches work? How much water does it take a car to float away in a flood? How are dams, harbours and breakwaters designed? And how, exactly, is it all tested anyway?...

The Water Research Laboratory (WRL) is one of the biggest scientific and engineering facilities in Australia, tucked away beside Manly Dam. Our "laboratory" doesn't have test tubes and lab coats; instead we have big wave machines and fly drones. We build models of dams and harbours larger than a lounge room!

Come tour our massive labs, meet the experts, and see engineering and science at work. If you are interested in water, engineering, science or the environment, then come along! **All are welcome!**
